In assignment "Implement Perceptron Classifier", I had faced issues in running Jupyter notebook due to which I could not submit assignment by deadline.

2- I also got AssertionError:

I have no idea why given condition is not passed. I took some help from given source

<https://www.geeksforgeeks.org/python-assertion-error/>.

But, I still cannot find a way to solve this error in my assignment. I didn't want to get further delay so, I did submit this version. I would like to go back and solve this problem out later in course.
